BACK-END DEVELOPER

Motivated Junior Backend Developer with strong knowledge of server-side programming, database management, and API development. Skilled in writing clean, efficient code and collaborating with teams to build scalable web applications. Eager to learn new technologies and contribute to creating reliable backend solutions that support business growth.

PROFESSIONAL EXPERIENCE

Tester-Care (Laravel 11)

- Designed and engineered a full system to manage product listings, customer registrations, and repair tracking (device maintenance status).
- Integrated a real-time notifications system in the dashboard for each new order booking.
- Delivered complete CRUD operations, authentication, role management, and API endpoints.

Cart System (Laravel 11)

- Developed a shopping cart system with Stripe payment gateway integration.
- Enabled guest checkout to streamline the purchase process without requiring registration.
- Implemented robust cart management and optimized order processing using Laravel best practices.

GitHub Link:

<https://github.com/MahmoudEbrahimmm/Cart>

Online-Shop (PHP Native, MySQL)

- Created a lightweight e-commerce platform to upload and showcase products.
- Delivered a simple yet effective product management dashboard.
- Designed a minimal front-end interface for quick product browsing.
